

O cuidado é de cada um O benefício é de todos

Os índices da vacinação no Brasil estão abaixo dos padrões de segurança desde 2015. A ausência de vacinação expõe as pessoas a doenças graves evitáveis pela vacina. Vamos juntos combater a baixa cobertura vacinal.

Vamos vacinar contra **Poliomielite**

O reforço com a vacina atenuada via oral (em gotinhas) deve ocorrer entre os 15 e 18 meses.

2

1

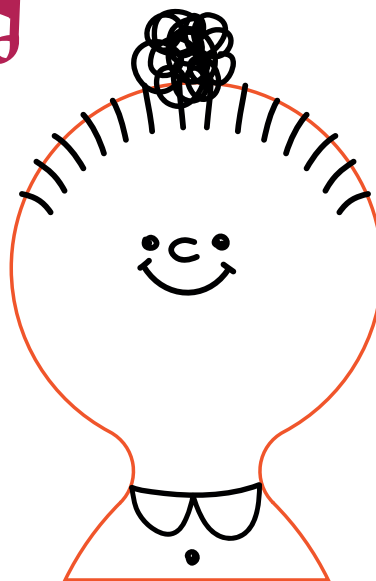

A vacina inativada deve ser aplicada em bebês de 2, 4 e 6 meses de idade.

3

Depois, mais uma vez, entre os 4 e 5 anos de idade.

Imunização completa
